Safetac® technology is less painful

Safetac® is a patented adhesive technology that is less painful for the patient at dressing removal and less traumatic to the wound. Safetac technology hurts less because it:

- Adheres gently to dry tissue, but not to moist wound surfaces15
- Conforms to the skin’s uneven surfaces, covering more skin surface and spreading peel forces on removal to prevent skin stripping16
- Seals the wound margins, ensures exudate does not spread to the surrounding skin and minimizes maceration15

Removal of a dressing with traditional adhesive. Epidermal cells are stripped, causing wound trauma and pain.

Removal of a dressing with Safetac technology. No skin-stripping.

Removing a dressing with traditional adhesive. Epidermal cells are stripped, causing wound trauma and pain.

Do Not Disturb.

Up to 14 days undisturbed healing14 and less pain at dressing changes.
Mepitel is an innovative self-adhering wound contact layer that allows ample time for the healing process and minimizes pain for the patient on removal. The combination of these exceptional benefits make Mepitel the superior dressing option for a variety of wound applications:

- Highly-transparent design allows assessment of the healing progress without removing the contact layer.
- Unique double sided Safetac® adhesive keeps outer absorbent dressing securely in place during application.
- Safetac® technology minimizes pain at dressing changes and the spread of exudate that causes maceration and delays healing.
- Mepitel maintains its functional properties longer than other dressings and does not leave residue on the wound.
- Maintains integrity over time; does not dry out and leaves no residue on removal.
- Effective open mesh design enables free transfer of exudate to outer absorbent dressing and delivery of topical preparations to the wound bed.
- Impressively conformable, ensuring an excellent fit in difficult to dress areas.
- Gentle Safetac technology for the most sensitive skin.
- Conformable design ensures effective application and patient comfort.
- May remain in place for up to 14 days for undisturbed healing.

Areas of use:
- Skin Tears
- Skin Abrasion
- Surgical Incisions
- Second Degree Burns
- Blistering
- Lacerations
- Diabetic Ulcers
- Venous and Arterial Ulcers
- Partial and Full Thickness Grafts

Which Mepitel dressing should you choose?

**Mepitel**
- Safetac layer on both sides —
  - Double sided Safetac technology for extra fixation of outer absorbent dressings
  - Excellent transparency for ongoing wound assessment
  - Gentle Safetac technology for the most sensitive skin
  - Conformable design ensures effective application and patient comfort
  - May remain in place for up to 14 days for undisturbed healing

**Mepitel One**
- Safetac layer on wound contact side only —
  - One sided Safetac technology offers easier application and sole use options
  - Full transparency allows for critical wound assessments without the need to disturb the dressing
  - Stronger Safetac adhesion for extra security
  - Highly conformable for excellent fit in difficult to dress areas
  - May remain in place for up to 14 days for undisturbed wound healing

Transparent Mepitel One is an innovative self-adhering wound contact layer that allows ample time for the healing process and minimizes pain for the patient on removal. Avoiding the need for dressing removal can help minimize patient pain and unnecessary disturbance to the healing process. Mepitel One improves your ability to make critical assessments of the wound without removing the dressing.
**Safetac® technology is less painful**

Safetac is a patented adhesive technology that is less painful for the patient at dressing removal and less traumatic to the wound. Safetac technology hurts less because it:

1. Adheres gently to dry tissue, but not to moist wound surfaces\(^{15}\)
2. Conforms to the skin’s uneven surfaces, covering more skin surface and spreading peel forces on removal to prevent skin stripping\(^{16}\)
3. Seals the wound margins, ensures exudate does not spread to the surrounding skin and minimizes maceration\(^{15}\)
